About Me

Detail Info

Birth Date
16/May/2002

Summary
I am a tech-focused python developer for up to 3 years now.

I am a first year undergraduate student from Federal University of Technology Minna, where I study Mathematics and statistics.

I've worked hard in my education and now I'm ready to apply my knowledge into practice.

While I don't have any production ready live project, I've had a lot of exposure to the data science environment. A lot of the courses involved working with real companies to solve real problems.

Now, I'm looking to leverage everything I've learned as a self taught data scientist and get some real world hands-on work experience.

In my downtime, I enjoy reading about AI, tech, and data scientist.

Education

Federal University of Technology Minna.

2021 - present
Mathematics

Experience

Freelancer

June -2021 - July -2021
Machine Learning Engineer
I worked with a frontend and an API developer in creating a automatic question generation model which is a natural language processing task.

Portfolio Build

2021 - 2021
Personal Projects
I have created numerous project which include but not limited to object detection and recognition program, computer vision tasks and natural language processing tasks. I have work extensively on Python machine learning libraries and Frameworks TensorFlow, Keras, Pandas, Numpy, scikit-learn and other data analysis libraries. I also advance my knowledge by working with application web

framework like Flask.

Projects

Chatbot Project
May -2021 - May -2021

Chatbot
I created a automatic chatbot based on TensorFlow machine learning library.

ALPR Project
August -2021 - August -2021

Automatic License Plate Recognition
I created a automatic license plate recognition model to detect and recognize any vehicle plate number.
